

# Introducing the NEW Astra Canada Espresso Machine

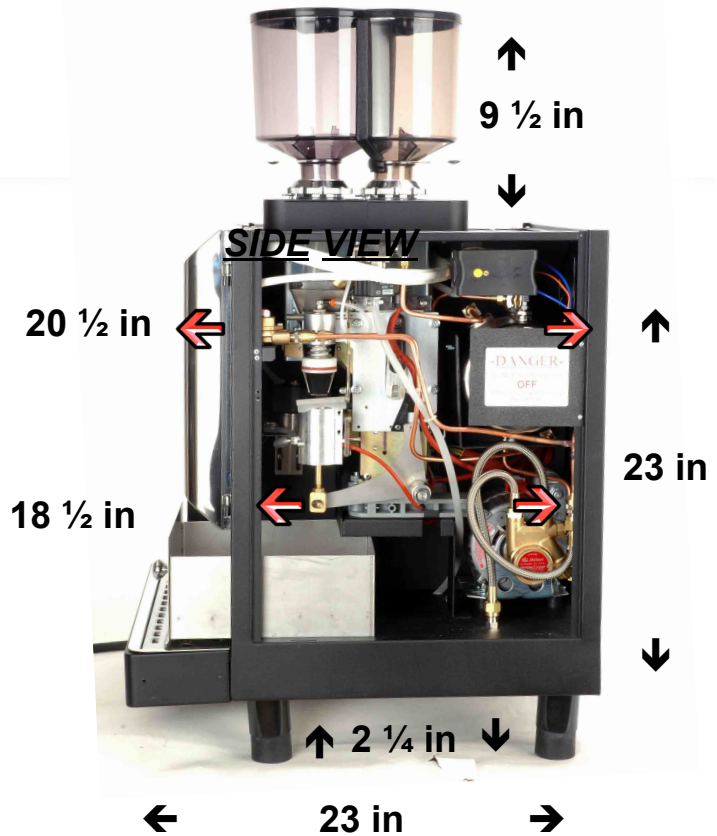

The **ASTRA** Canada is capable of producing a variety of espresso and American coffee based drinks including caffeinated and decaffeinated espresso, cappuccino, latté, café au lait and gourmet American coffee drinks. Unlike other coffee machines, the **ASTRA** does not pre-grind the coffee beans. Once the user selects the desired drink, the **ASTRA** grinds the whole coffee beans, tamps the ground coffee and extracts the perfect amount of coffee - providing a fresh drink every time! If the desired drink requires milk or hot water, the **ASTRA** then steams and dispenses the necessary milk or hot water.

## The following are standard on all **ASTRA** coffee machines:

- \* Brewing system w/thermo circulation design for absolute temperature consistency
- \* Quiet internal motor with rotary-vane procon pump
- \* Self-tamping mechanism
- \* Microprocessor-controlled diagnostic system for quick troubleshooting
- \* Programmable by user
- \* Two (2) year manufacturer's limited warranty on parts

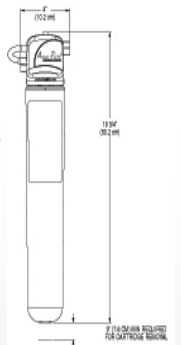

<b>SUPER AUTOMATIC ASTRA SPECS</b>	
<b>Production</b>	<b>180 cups/hour</b>
<b>Different Drinks</b>	<b>7</b>
<b>Boiler (Liters)</b>	<b>4.2, Nickel-Plated</b>
